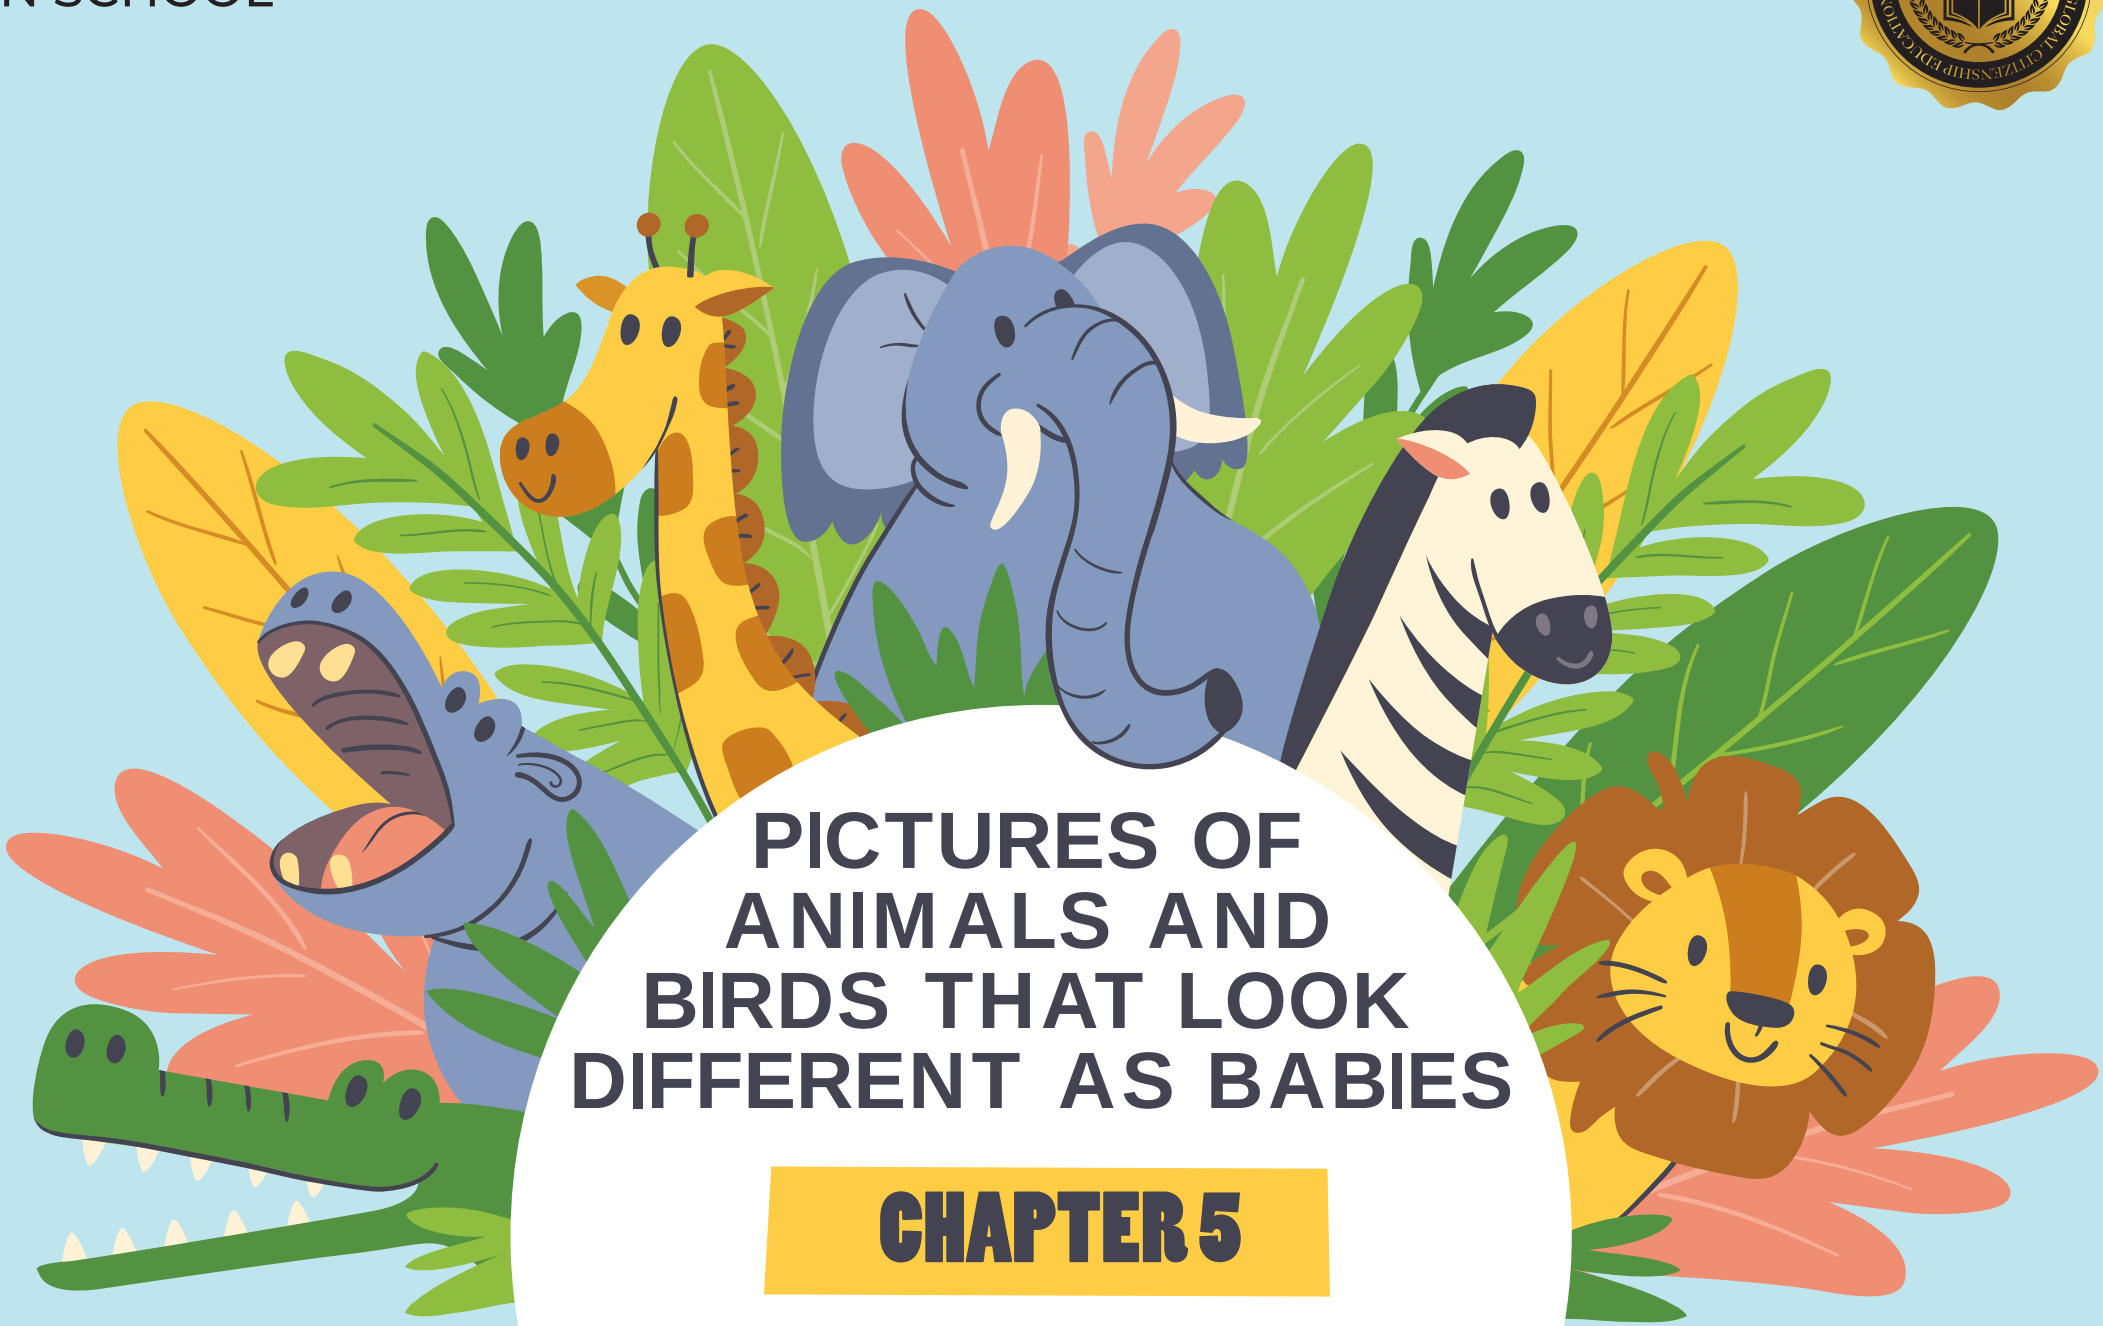
MYSTICLAND IN SCHOOL



PICTURES OF ANIMALS AND BIRDS THAT LOOK DIFFERENT AS BABIES

CHAPTER 5

Adult: Cat
Baby: Kitten

Kittens are born with their eyes closed. They open their eyes after 7 to 10 days.

Adult: Dog
Baby: Puppy

Puppies are born in a litter. This means a mother dog usually has many puppies at one time. A litter can have anywhere from 1 to 12 puppies or even more!

Adult: Lion
Baby: Cub

Cubs practise hunting by playing with their siblings. At the age of one, they learn to hunt and join their pride in chasing prey.

Adult: Giraffe
Baby: Calf

Giraffe calves are very tall when they are born. They can stand and walk within a few hours of birth.

Adult: Kangaroo
Baby: Joey

Kangaroo joeys are very tiny when they are born, about the size of a peanut! They are born blind and hairless.

Adult: Sheep
Baby: Lamb

Lambs have soft, woolly coats when they are born. As they grow, their wool becomes thicker and coarser.

Adult:Horse
Baby: Pony

In horse slide change pony to foal. A foal's coat can change colour as it gets older. Some foals are born dark and get lighter as they grow.

Adult: Cat
Baby: Kitten

Piglets have a great sense of smell. Even as babies, they can sniff out food.

Adult: Frog
Baby: Tadpole

Tiny tadpoles look like fish with tails but no legs. They use their tails to swim around in the water as they grow.

Adult: Squirrel
Baby: Kit/Kitten

Squirrels teach their babies to climb. When they are old enough, the baby squirrels start climbing trees and gathering food like their parents.

Adult:Hen
Baby: Chick

Chicks grow quickly. Within a few weeks, chicks grow their adult feathers and start to look like little chickens!

Adult: Monkey
Baby: Infant

Unlike some animals, baby monkeys are born with their eyes open. They start to see the world around them as soon as they are born.

Adult: Goat
Baby: Kid

Even as babies, goats are known for their ability to jump and climb on objects.

Adult: Crow
Baby: Chick

Baby crows can be noisy. When they are hungry or need attention, they make loud calls to their parents. It helps the parents find them quickly.

Adult: Fish
Baby: Fry

Fish lay many eggs. Most fish lay hundreds of eggs at a time. These eggs are often left in the water to hatch on their own.

Adult: Cat
Baby: Kitten

Fawns are very quiet. To stay safe from predators, baby deer stay very quiet and lie still for the first few weeks after birth. Their mothers then go off to eat.

Adult: Crocodile
Baby: Hatchling

Inside their eggs, baby crocodiles start making loud noises. This alerts the mother that they are ready to hatch. She then digs them out of the nest.
