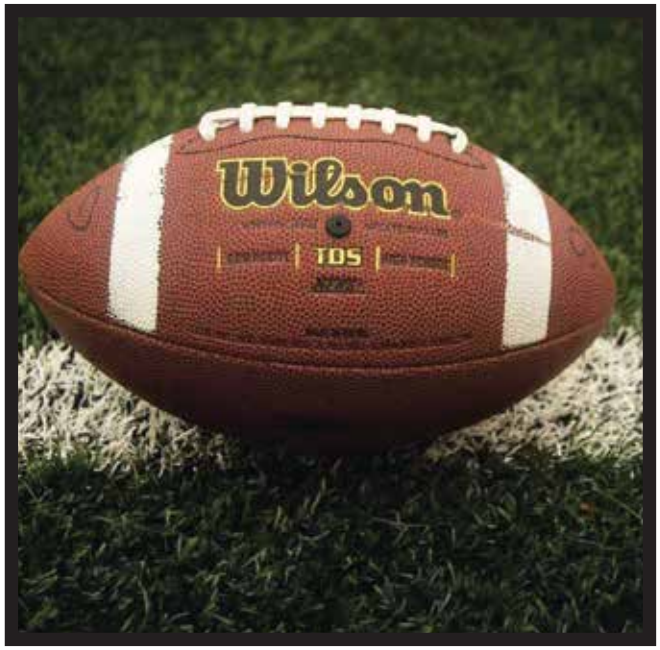
# DIFFERENT GAMES, DIFFERENT GAME BALLS

CHAPTER 7

# Take a look at the different types of footballs used in the FIFA World Cups

# Notice the detailed stitches on the rugby ball

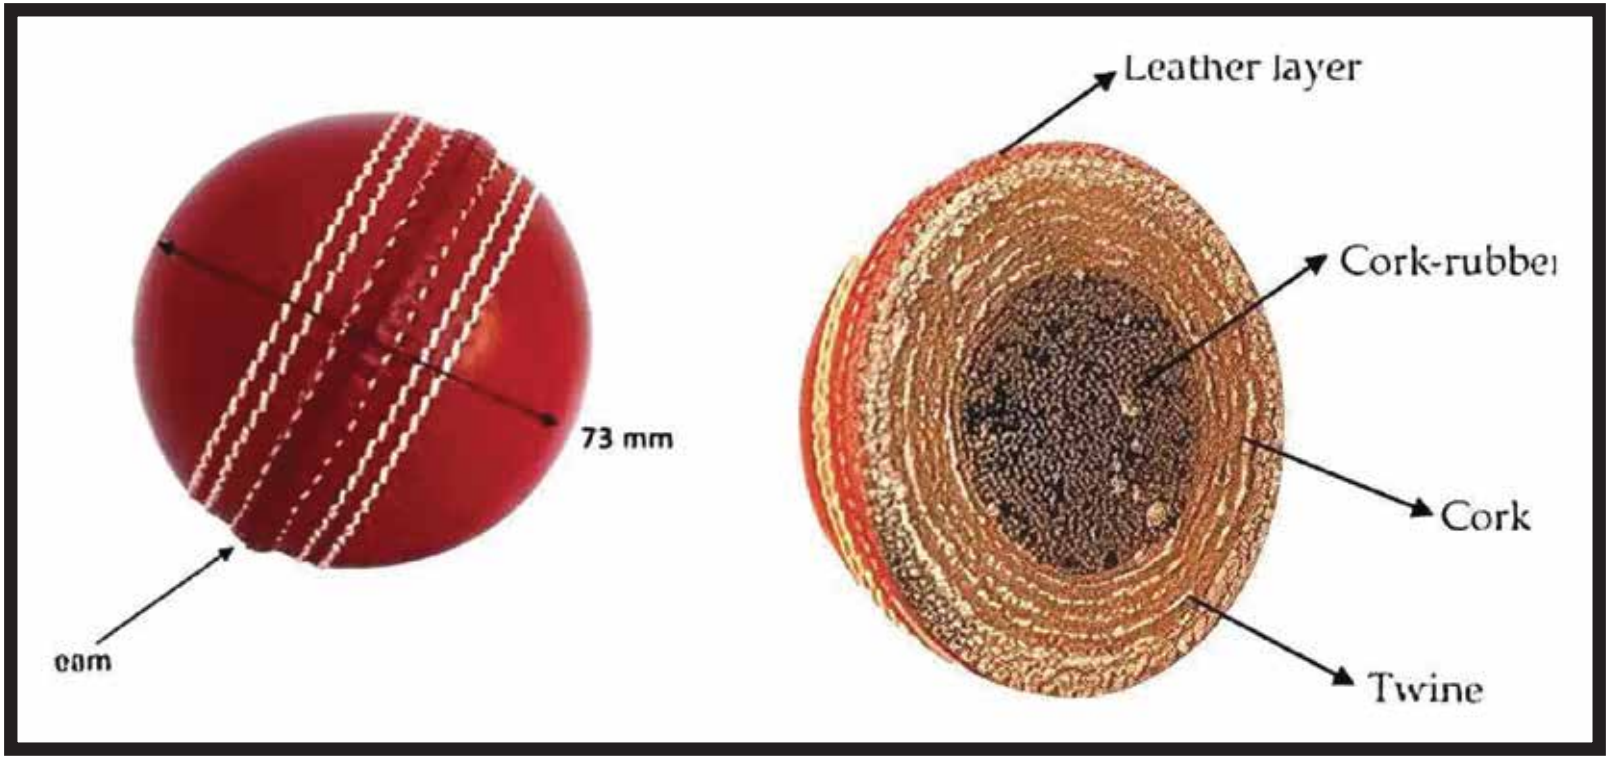


Early rugby balls were handmade using leather and were stitched with laces to hold the shape, giving them a distinct appearance.

# Which basketball do you like to play with?

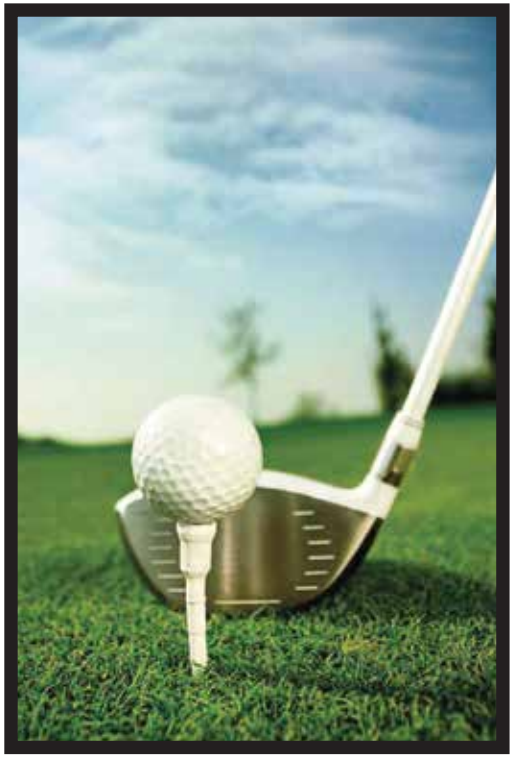
Basketballs are made of synthetic leather or rubber and are designed to bounce evenly for smooth dribbling and passing.

# What's inside a cricket ball?



The cricket ball is hard and bouncy, which can make it difficult for players to hit and catch, but it helps bowlers to create faster speeds and spin.

# A golf ball can have 300 to 400 dimples!

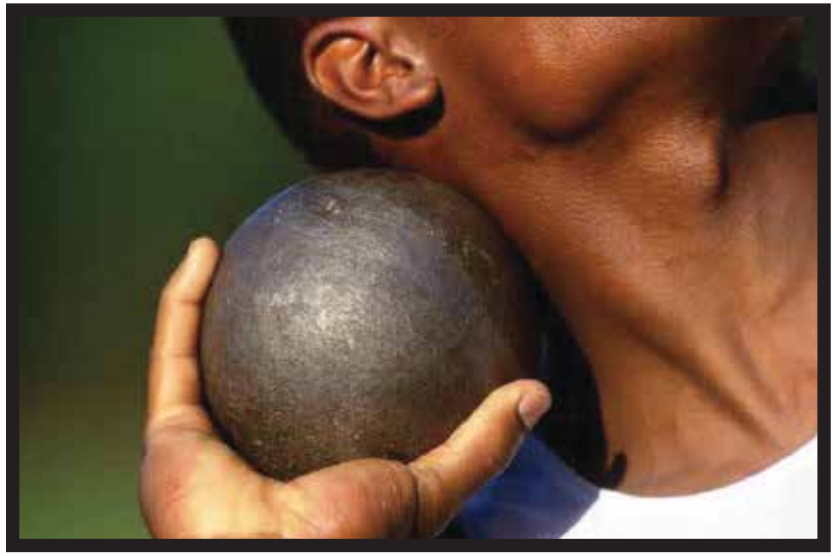


The dimples on its surface help the ball travel farther through the air.

# Notice the differences between a hockey ball and a golf ball

Hockey balls have a smoother surface than golf balls. They are also slightly larger than golf balls.

# Take a look at the heavy shot put ball and how it is kept



Shot put balls are typically made of metal, such as iron, steel, or brass, and are designed to be thrown as far as possible.

# Measuring the distance between the lawn bowl and the kitty
