FISH
ELEPHANT
BIRD HEAD
MOSQUITO
DONKEY
DOG
DOLPHIN
CROCODILE
SNAKE
CAT
PRAWN
MOUSE

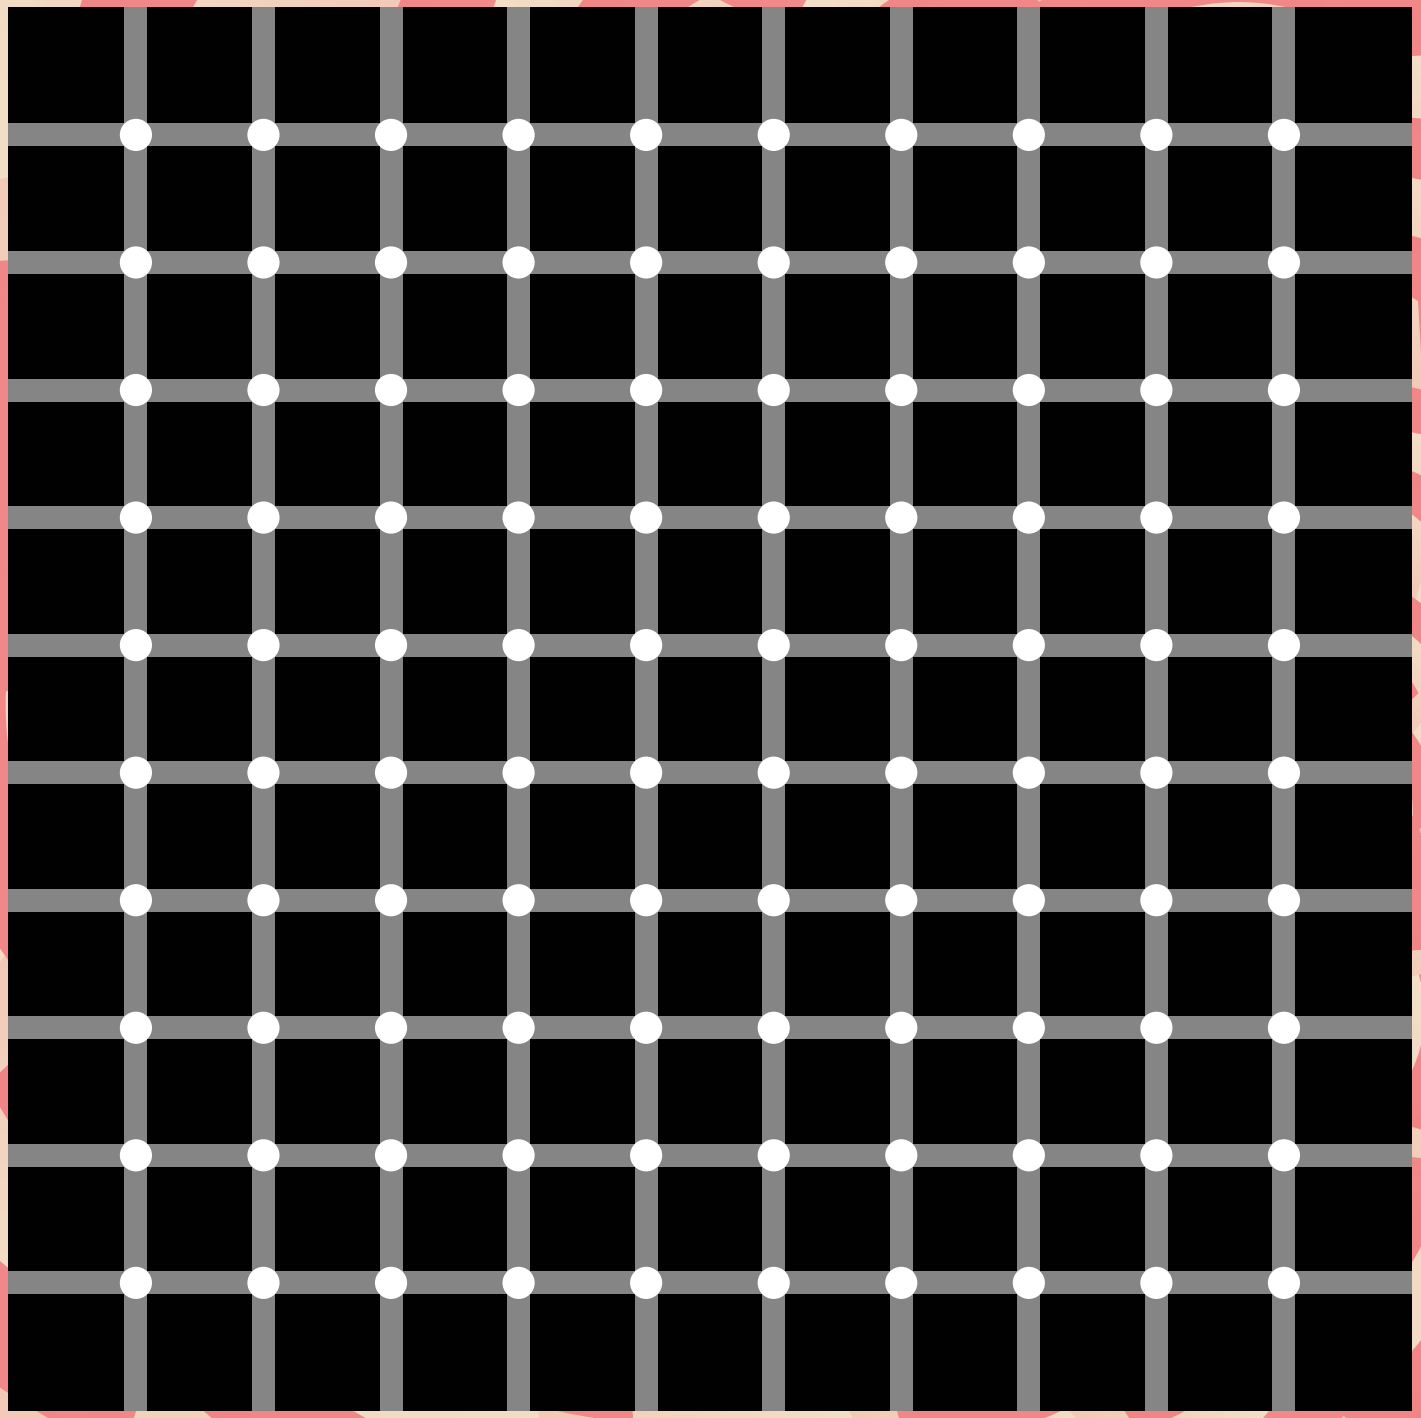

Are these circles going round and round? Or are they still?

The stripey circles look like they are spinning because your eyes and brain are playing a trick on you!

When you look at the whole picture, your brain gets confused.

But when you focus on one circle, your brain can understand it better. It realises that it's not actually spinning—so it stays still!

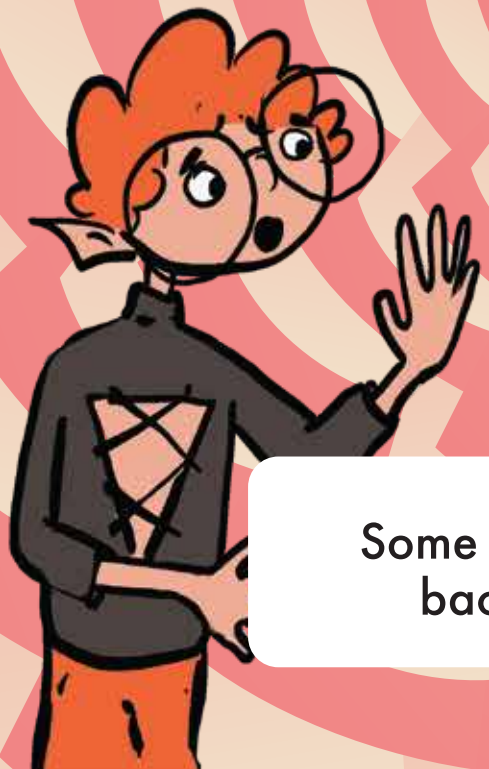

Try to catch the black dots!

Are they blinking and running away? Yes!
If you try to catch a dot, does it turn white and stop moving? Yes!

This happens because your brain gets confused. Your brain is seeing many squares at a time. It does not know where to focus. So, it "creates" black dots on its own like magic! But when you look[illegible]e dot, your b[illegible]cus better.

Some people see a young lady with her head turned towards the background while others see an elderly woman's side face.
